

DISPLAY PANELS

Cycle-Safe[®] Display Panel Features

Simpler. Stronger. Smarter.

The ProPark display panel features redesigned end panels that enhance the quality, appearance and value of the ProPark System. The one-piece thermoformed ABS material offers superior puncture and impact-resistance. Our baked on polyurethane finish offers unmatched graffiti and UV resistance that withholds the long lasting Cycle-Safe tradition. The one-piece design

allows for a thicker, stiffer panel than the previous ProPark Solution. We've added more fastening points to the panel, with a positive interlock connection to adjacent parts. So the junction between end panel and other components is virtually seamless – and even more impervious to vandals. Display panels offer endless opportunities to enhance and promote cycling.

DISPLAY PANELS

More Ways to Look Great.

The ProPark Display Panel creates a streamlined look that complements a wider range of architectural and environmental aesthetics. The ProPark panel features a new recessed area that is ideal for cycle and promotional messages. Want even more space for messaging? The entire panel surface can be made flat to create a larger display area. Additional insert options include:

- Snap-in frames make it easy to change messages on a regular basis. Two sizes to choose from: 24" x 60" frame for the recessed area and a 44" x 72" frame which covers the entire end panel.
- View-Thru™ option – larger than before offers increased visibility of interior.
- Consider the possibilities with display panels, transit maps, Bike-To-Bus signs, special promotions, program identity, or corporate sponsorship, backlit media panels, LED display screens.
- Refreshingly stylish, clean and unobtrusive. Digitally delivered news and information add street-level vibrancy and a new dimension to city living.
- Communications made simple with Avery type adhesive labels or laser cut graphics.

Better Economy Gives You a Better Return on Investment.

ProPark already offers a faster return on investment. The new ProPark panel offers even more ways to save:

Save space.

Our new ProPark end panel design saves 12 inches in width on a row of lockers, giving you more flexibility for tight spaces without compromising the bike storage capacity of our standard line. Our lockers can even store cruiser bikes. A starter unit is 43" wide x 78" deep x 52" high (on strut). Add-on modules are 38" wide x 78" deep x 52" high (on strut).

Save time.

Fewer parts means easier on-site assembly. Units are shipped flat packaged for freight savings. For preassembly option call for quote.

Save money.

With fewer parts to buy, ship and install, the average cost of a ProPark Bike Locker is lower than ever. We guarantee lifetime cost savings as with all of Cycle-Safe bike parking products.

Always Compatible.

Cycle-Safe's ProPark lockers have a simple, attractive and unobtrusive design that's compatible with roadside, trailside and urban center environments. Existing installations can be retrofitted to upgrade for new options.

Now, more than ever, ProPark bicycle lockers by Cycle-Safe are the best choice for secure bicycle parking.
